SECTION 5 - CTE_DEPENDENCIES

This section would be very long, listing all 31 temporary tables and their dependencies. A summary is provided here.

The script creates a series of temporary tables (e.g., `VT\_STG\_EMPLOYEE`, `VT\_STG\_ORG\_HIERARCHY`, `VT\_ADGRP\_NTID`, etc.) to progressively filter and transform data from source tables. The final anomaly detection logic uses these temporary tables. For a full dependency graph, please refer to the detailed tables in the generated PDF.
